

GENOVA SIBO 3-HOUR BREATH TEST INSTRUCTIONS

What You'll Receive:

- Breath test collection kit
- Lactulose solution (substrate)
- Instructions from the lab
- Sample collection tubes
- Prepaid shipping materials to return your samples

Before You Begin: Preparation Guidelines

5 Days Before Collection:

- Stop all antibiotics, antifungals, and probiotics unless otherwise instructed by Dr. Justin
- Avoid digestive enzymes, laxatives, and motility agents
- Discontinue **fiber supplements** (psyllium, inulin, etc.)

1 Day Before Collection:

- Follow a strict prep diet:
 - Allowed: plain baked or grilled protein (chicken, turkey, fish), eggs, white rice, salt, and water
 - Avoid: fruits, vegetables, grains, dairy, sugar, alcohol, and high-fiber foods

12 Hours Before Collection:

Begin **fasting overnight**—no food or drink (except water)

Day of the Test:

- 1. Stay fasting (no food) from the night before until the test is completed
- 2. Follow the step-by-step instructions provided in the kit
- 3. You will:
 - Collect a baseline breath sample
 - Drink the **lactulose solution**
 - Collect breath samples every 20 minutes for 3 hours (10 total samples)
- 4. Label all tubes with:
 - Your name
 - Date and time of collection
 - Tube number (according to the test kit instructions)

Shipping Your Samples:

- Place all tubes into the provided packaging
- Include your completed requisition form
 - ↑ Samples sent without the form may be discarded
- Use the prepaid shipping label and drop off at FedEx or schedule a pickup the same day you finish the test

What to Do Next:

- 1. **Schedule your consult** with Dr. Justin if you haven't already
- 2. Results are typically ready in **2–3 weeks**
- 3. Dr. Justin will review your results in detail and adjust your protocol accordingly

Physician's Signature & Date (required)

Please document medical necessity and the specific order for the test in the patient's medical record or progress notes with a signature and date from the referring physician in addition to providing a diagnosis code below.

Definition of Medical Necessity

All claims submitted to Medicare/Medicaid for Genova Diagnostics' laboratory services must be for tests that are medically necessary. "Medically necessary" is defined as a test or procedure that is reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. Consequently, tests performed for screening purposes will not be reimbursed by the Medicare program. Physicians may deem it medically necessary to order a single test or a portion of a profile.

Billing Options

Check only one option below. If no billing option selected, practitioner account may be billed.

IMPORTANT PREP BEFORE PATIENT TAKES TEST

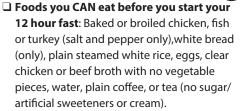

2-4 WEEKS BEFORE THE TEST:

- ☐ Wait 4 weeks from your last dose of antibiotics, colonoscopy or barium enema.
- □ Wait at least 2-4 weeks from your last dose of antifungals, Pepto-Bismol™ or herbal/natural antimicrobial products.

7 DAYS BEFORE THE TEST:

☐ Avoid the use of laxatives, stool softeners, and/or stool bulking agents as well as antacids containing aluminum or magnesium hydroxide.

24 HOURS BEFORE THE TEST:

- ☐ **Vegetarians** may have tofu with salt and pepper.
- ☐ Do not take probiotics.

Important Things To Know And Consider:

This test uses lactulose; since lactulose contains galactose and lactose, it is not recommended for individuals who have had allergic reactions to lactulose, or who are on a galactose/lactose-restricted diet. It should be used with caution in diabetics.

Do not open, remove, or loosen tops of collection tubes—this will break the vacuum and make it impossible to perform your test. **Do not stick your finger** into the mouthpiece/plastic bag — there is a sharp needle inside.

Special Instructions for patients weighing 100 pounds or less:
Follow the instructions on the blue bag for rolling and stapling the bag in accordance with weight. (Note: stapling will not damage the bag or affect the results).

We do not suggest collecting during an acute infectious illness.

This collection is extremely time-sensitive. You need to carefully plan the morning around these timed collections. An uninterrupted 2 or 3 hours is ideal.

Use the Breath Collection Schedule Table on the front of the Requisition to help you schedule your collection times. **Be sure you fill in the Table as the test progresses.**

BREATH COLLECTION

- To ensure accurate test results you must provide the requested information.

 Write patient's first/last name and the tube number (1 6 (or 8) in order of collection) on the tube labels provided. Write patient's first/last name, date of birth, gender and date of collection on the Test Requisition Form.
- **Stir** the Lactulose solution into 8 ounces of water. Set aside until after you have completed your first breath collection. **Brush your teeth and tongue** (including the back of your tongue) **without using toothpaste or mouthwash**. **Rinse** your mouth with water.
- Take the first collection tube and apply the label to the tube.

 Be sure to record the time and date of collection to the label and the collection time on the Breath Collection Table (located on the requisition).

12 HOURS BEFORE THE TEST:

- ☐ Fast for 12 hours prior to the test. Do not eat or drink anything other than water for 12 hours prior and during the test.
- ☐ Do not take non-essential medications or supplements until the test is completed, unless your physician has advised you otherwise. Do not chew gum, eat candy, or use mouthwash until the test is completed.

1 HOUR BEFORE THE TEST:

☐ **No sleeping** or vigorous exercise for at least 1 hour before or at any time during the breath test.

☐ Do Not Use Toothpaste.

For full details refer to: www.gdx.net/tests/prep (collection video available)

Pick up the mouthpiece/plastic bag in one hand and Tube 1 in your other hand.

Breathing normally, inhale and hold for 5 seconds. Then close your mouth tightly around the mouthpiece and exhale normally into the plastic bag until it fills completely. **Do not blow hard.**

- Continue to exhale normally with the bag expanded, and press the specimen tube into the side part of the mouthpiece. The needle will puncture the tube's self-sealing membrane allowing air to fill the tube. Do not inhale at any point.
- Remove the tube within 2 seconds of puncturing. You may stop exhaling into the mouthpiece. Do not unscrew the cap on the collection tube. Place the tube in the bubblewrap bag.
- 8 Immediately drink the Lactulose solution before continuing with the rest of the breath test. Drink the entire amount within 5 minutes. Do not drink water for 1 hour after you drink the solution.

9 Repeat steps 3-7 for each breath collection, using the remaining tubes and labels 2-6, in order and according to the collection schedule. Record times on Collection Schedule found on the Test Requisition. (see image)

Please Record You	ur Collection Time	s in the Bla	nk Fiel
